

LEGENDS OF MOTOWN TECH SPEC

PA/SOUND

The show carries a high quality sound system which is self-engineered for venue capacity <500 persons. For venues of capacity >500 persons a reputable PA company will be hired with a front of house engineer. For venues with sufficient in-house systems we will provide a main LR to the system. Details of the above can be discussed at the time of booking as individual venue spec tends to vary.

LIGHTING

Venue lighting operated by an in-house engineer will be required at each venue. A few blackouts are required in set 1, a running order will be provided. Otherwise, lighting is at the operator's discretion. (The show carries some on stage 'tube' lighting for added effect, space permitting).

PROJECTOR

The show runs video footage which will need to be presented via an in-house projector where possible. We prefer to operate via HDMI(ideally to stage right)to laptop from stage but instructions can be given to a lighting tech if operation can only be done in the 'box'. Where not possible or in event of in-house projector hire fee, we bring a projector & canvas screen, operated via stage. Points at which video footage will be played can be found on the lighting running list. All audio of the video footage will be played through the shows mixing desk/front of house mixing desk.

STAGE RISERS

If possible and available at no extra cost, we require x1(2m x 2m) in-house riser for drum kit.
